

SAGI RAMA KRISHNAM RAJU ENGINEERING COLLEGE (AUTONOMOUS)

(Approved by AICTE, New Delhi, Affiliated to JNTUK, Kakinada)

Accredited by NAAC with 'A+' Grade, Accredited by NBA (UG: Civil, CSE, ECE, EEE, IT & ME)

Recognised as Scientific and Industrial Research Organisation

SRKR MARG, CHINA AMIRAM, BHIMAVARAM – 534204 W.G.Dt., A.P., INDIA

LIST OF OPEN ELECTIVES OFFERED BY VARIOUS DEPARTMENTS TO OTHER DEPARTMENTS IN III YEAR II SEMESTER

INDUSTRIAL MANAGEMENT

(Offered by ME)

(Offered to AIDS, AIML, CE, CSIT, CSBS, CSD, CSE, CIC, ECE, EEE & IT)

Course Objectives: The objectives of the course are to

- 1. Introduce the scope and role of industrial engineering and the techniques for optimal design of layouts
- 2. To know the production activities with reference to planning and control
- 3. Illustrate how work study is used to improve productivity
- 4. Explain TQM and quality control techniques
- 5. Discuss human resource management and value analysis.

Course Outcomes: After completing this course, students will be able to:

S.N o	Outcome	Knowledge Level
1.	Use principles and quantitative techniques to optimize plant layouts and productivity.	K3
2.	Apply production planning techniques to optimize scheduling and process control.	К3
3.	Demonstrate method study and time measurement techniques to optimize work processes.	K3
4.	Apply SQC techniques and TQM methods to analyze quality data and improve production systems	K3
5.	Demonstrate HRM strategies and value engineering for organizational improvement	К3

SYLLABUS

UNIT-I (10 Hrs)

INTRODUCTION: Definition of industrial engineering (I.E), development, applications, role of an industrial engineer, differences between production management and industrial Engineering, quantitative tools of IE and productivity measurement. concepts of management, importance, functions of management, scientific management, Taylor's Principles, theory X and theory Y, Fayol's principles of management.

PLANT LAYOUT: Factors governing plant location, types of production layouts, advantages and disadvantages of process layout and product layout, applications, quantitative techniques for optimal design of layouts, plant maintenance, preventive and Break down maintenance.

UNIT	r tt	PRODUCTION PLANNING AND CONTROL: Types of productions, Production									
		cycle, Product design and development, Process planning, Forecasting (simple problems),									
(10 H	118)	Loading, Scheduling, Dispatching, Routing, Progress control.									
		WORK STUDY: Concept of productivity, Method study - Basic steps in work study,									
UNIT	-III										
(10 H)	Irs)	economy, Micro motion study, Therbligs, SIMO chart, Work measurement – Stop watch									
		procedure of time study, Performance rating, Allowances									
		STATISTICAL QUALITY CONTROL: Quality control, Quality assurance and its									
UNIT	T-IV	importance, SQC, attribute sampling inspection with single and double sampling, Control									
(10 H	Irs)	charts for variables and attributes, numerical examples.									
		TOTAL QUALITY MANAGEMENT: Zero defect concept, quality circles,									
		implementation, applications, ISO quality systems. Six Sigma-definition, basic concepts.									
		HIIMANI DECOLIDGE MANAGEMENT. Concert of human accounts									
		HUMAN RESOURCE MANAGEMENT: Concept of human resource management, personnel management and industrial relations, functions of personnel management, Job									
UNIT	Γ_ \	evaluation, its importance and types, merit rating, quantitative methods, wage incentive									
(10 H		Plans and types.									
(101)	113)	VALUE ANALYSIS: Value engineering, implementation procedure, enterprise resource									
		Planning and supply chain management.
